

- In intestinal environment, there are around 500 different species of bacteria. These organisms, which may be both useful and destructive, must be kept under control. Disruption of this equilibrium has an impact on the individual's health. These organisms create a bacterial barrier in the body and prevent dangerous compounds from entering the bloodstream. Poor gut health is linked to neurological and cognitive issues such as irritability, memory loss, forgetfulness and confusion.
 - It has been reported that probiotic Lactobacillus and Bifidobacteri strains reduce the amount of fecal microbial enzymes such as β -glucosidase, nitroreductase and urease, which have mutagenic and carcinogenic effects. Pro-kult boosted, consisting of 14 Probiotic Microorganisms and Vitamin B12, has been found to have many benefits such as strengthening the immune system and removing cancer-causing enzymes from the environment in prevention and treatment of gastrointestinal diseases.
- Effective in alleviating the symptoms of depression.
 - Helps to reduce chronic fatigue.
 - Effective in preventing gastrointestinal disorders.
