

- Pullulan is a natural fibrous polymer produced by the black yeast known as Aureobasidium Pullulans. Pullulan is water-soluble, has strong properties such as film-forming, plasticity, and viscosity, and is used in the body to resist drying and tearing in cells. Pullulan mask moisturizes skin, protects skin from mechanical effects, makes it look tights, and protects the skin from signs of aging by preventing oxidative damage.
 - Pullulan hydrogel mask is composed of natural vegetable polymers that deliver active and nourishing ingredients deep into the skin. The active ingredient of the gel reacts to skin and penetrates the skin quickly. Unlike ordinary sheet masks, the evaporation of the active ingredient is prevented, and the active ingredients stay on the skin for a long time. Pullulan mask is a mask that creates a visible lifting effect with its new formulation. It is also effective in improving fine wrinkles. It creates an immediate tightening effect and reducing wrinkles around the eyes up to 74% through one hour.
-
- nourishes and replenishes the lack of moisture in the cells of the epidermis.
 - rejuvenates and tightens the skin.
 - slows down the aging process.
 - Increases the protective functions of the skin and strengthens the lipid barrier.

Properly stick the upper and lower parts of the mask on clean skin. We recommend waiting 20 minutes.
