

INSULIPON 600mg/50ml sol.inj.

- Alpha-lipoic acid (ALA) is a sulfur-containing fatty acid that occurs naturally in your body. Lipoic acid is unique among other antioxidants because it is both water and fat soluble. It restores other antioxidants that have been depleted in the constant battle against free radicals in your cells. This allows you to use the antioxidants already in your body, vitamin C and E, glutathione and CoQ10, repeatedly.
- Insulipon is an injectable solution containing 600 mg of alpha-lipoic acid as an active substance. Alpha-lipoic acid boosts the production of the neurotransmitter acetylcholine. And even increases glucose uptake in brain cells. Providing you with a boost of mental energy. It is indicated for the treatment of peripheral diabetic neuropathy symptoms.

For intravenous administration 50 ml of solution for injection daily (equivalent to 600 mg/day of alpha-lipoic acid) is recommended.
