

- Glutathione is an antioxidant that's made up of three amino acids—cysteine, glycine, and glutamine. It is produced by the liver and involved in many body processes. As an antioxidant, glutathione helps fight free radicals, unstable molecules that can damage cells and have been linked to inflammation.
- TAD is composed of 600 mg natural glutathione. Studies link decreased glutathione (GSH) homeostasis to the pathogenesis of many diseases, including Parkinson's disease, motor neuron disease, Alzheimer's disease, diabetes mellitus, asthma, lung and liver disease, carcinogenesis and aging.

It is used as 1 or 2 vials daily. The maximum dose is recommended as 5000 mg.
